

April 27 - May 1

1. Use the Raz Kids website to work on the new reading selection. (see previous weeks learning options for how to log on)
2. Use the math website iknowit.com for new quizzes. (see previous weeks learning options for how to log on)
3. Continuing with Fractions, see what you can find at home to represent fractions and fractions of a set. Draw or write about the fractions you find. This could be found in food, toys (ex. Lego), or any items around the house or outside. (How many skittles in a bag are red, yellow etc. and say and write this as a fraction.).
4. Explore outside for a habitat. What do you think lives there? Draw and label your habitat. Think of these questions as you are drawing and labeling: What does an area need to be called a habitat? What does a habitat need to be complete and healthy?
5. Using your spring sentences from last week, choose one as a topic for writing a spring story. Include the elements of a story that we have worked on in class - Beginning, middle, ending, punctuation, upper case letters in the correct places and interesting word choices.
6. As always: read daily for at least 20-30 mins. (My suggestion: do this before bed...grab your favourite book or a novel you are working on and curl up in bed for the last part of your day...but whatever time of day works for you is perfect!!).

**** Again, these are learning options. Please do what you can and what fits your learning environment. If there are questions or concerns please send me an email: dianna.hosford@nbed.nb.ca**
